CS504 GDB No1 Spring 2023

Yes! The concept of "Software Crisis" still relevant in today's software development industry. Reason: Despite advancement in technology and software development methodologies, challenges and issues related to software development still persist. The complexity of software system continues to increase, demanding more efficient and reliable solutions. Budget constraints, time pressures, managing software quality, and delivering successful projects remain ongoing challenges. Additionally, as software is integrated into various domains, such as healthcare, finance, and transportation, the impact of software failure and vulnerabilities can be significant, emphasizing the relevance of addressing software crisis-like issues in the present-day software industry.
